NETWORKWALKS

CYBERSECURITY ASSESSMENT REPORT

Footprinting • Web Reconnaissance • Network Discovery

REPORT DETAILS	VALUE
Name	LEINAKA SAMORA
Company	NETWORKWALKS
Position	Cybersecurity Assessment
Date	12 November 2026
Assessment scope	Local IP addresses and VMware or Virtual Box
Authorization reference	See the evidence section

Prepared for authorized security assessment, asset discovery and exposure management.

Executive Summary

This report provides a repeatable method for documenting external footprinting and web-technology reconnaissance, reviewing publicly indexed exposure indicators, and discovering live devices on an authorized local network using Zenmap. No target domain, IP range, scan output or evidence files were supplied when this template was prepared; therefore, all result fields are intentionally left blank for verified findings. Do not treat example commands or placeholders as completed test results.

Assessment objectives

- Identify publicly observable domain-registration and DNS information for an in-scope domain.
- Record web-server and application technology indicators and HTTP response headers.
- Determine whether a web application firewall (WAF) is detectable from permitted, low-impact checks.
- Document search-engine indexing and exposure indicators without accessing private data or unauthorized camera feeds.
- Discover live hosts on an approved LAN subnet and record IP/MAC details where visible.
- Preserve evidence, document limitations and prioritize remediation.

Scope, authorization and safety

Perform checks only against domains, systems and LAN ranges owned by NETWORKWALKS or covered by explicit written authorization. Use a defined test window, rate limits and emergency contact. Avoid intrusive scripts, brute force, exploitation, authentication bypass, bulk downloading, and accessing or viewing private webcam streams. If an exposed camera or sensitive file is discovered, record the minimum metadata needed, do not open or redistribute its contents, and notify the system owner through an approved channel.

Methodology overview

Figure 1. High-level workflow; this is an illustrative process diagram, not a measurement of completed work.

SECTION 1 — Footprinting and Reconnaissance

Purpose: establish a documented picture of the authorized domain's registration, DNS configuration, web stack and perimeter protections using low-impact discovery techniques.

Tool / activity	What it identifies	Evidence to record
WHOIS	Registrar, creation/expiry dates, nameservers, status codes and registrant data where public.	Query date, registrar, dates, nameservers; redact personal data.
WhatWeb	Web server, CMS, frameworks, libraries and technology fingerprints.	Detected technologies, confidence, URL and timestamp.
Nslookup	DNS resolution and selected record answers.	A/AAAA/CNAME/MX/NS/TXT answers and resolver used.
cURL headers	HTTP response status and response headers.	Status, server/cache/security headers, redirect chain.
WAFW00F	Known WAF/CDN fingerprints from HTTP responses.	Detection result, confidence/limitations and timestamp.
DNSRecon	Standard DNS record enumeration and zone configuration indicators.	Record types, results, errors and whether AXFR was explicitly authorized.

1.1 WHOIS — domain registration details

WHOIS provides registration and registrar metadata where the registry makes it public. Privacy/proxy services may hide registrant details; do not attempt to bypass those protections.

```
whois example.com
```

Record: domain, registrar, registrar WHOIS server, creation/updated/expiry dates, domain status, authoritative nameservers and any public registrant organization. Replace example.com with an approved domain.

NOTICE: The expiration date displayed in this record is the date the registrar's sponsorship of the domain name registration in the registry is currently set to expire. This date does not necessarily reflect the expiration date of the domain name registrant's agreement with the sponsoring registrar. Users may consult the sponsoring registrar's Whois database to view the registrar's reported date of expiration for this registration.

TERMS OF USE: You are not authorized to access or query our Whois database through the use of electronic processes that are high-volume and automated except as reasonably necessary to register domain names or modify existing registrations; the Data in VeriSign Global Registry Services' ("VeriSign") Whois database is provided by VeriSign for information purposes only, and to assist persons in obtaining information about or related to a domain name registration record. VeriSign does not guarantee its accuracy. By submitting a Whois query, you agree to abide by the following terms of use: You agree that you may use this Data only for lawful purposes and that under no circumstances will you use this Data to: (1) allow, enable, or otherwise support the transmission of mass unsolicited, commercial advertising or solicitations via e-mail, telephone, or facsimile; or (2) enable high volume, automated, electronic processes that apply to VeriSign (or its computer systems). The compilation, repackaging, dissemination or other use of this Data is expressly prohibited without the prior written consent of VeriSign. You agree not to use electronic processes that are automated and high-volume to access or query the Whois database except as reasonably necessary to register domain names or modify existing registrations. VeriSign reserves the right to restrict your access to the Whois database in its sole discretion to ensure operational stability. VeriSign may restrict or terminate your access to the Whois database for failure to abide by these terms of use. VeriSign reserves the right to modify these terms at any time.

The Registry database contains ONLY .COM, .NET, .EDU domains and Registrars.

TERMS OF USE: The data contained in this registrar's Whois database, while believed by the
registrar to be reliable, is provided "as is" with no guarantee or warranties regarding its
accuracy. This information is provided for the sole purpose of assisting you in obtaining
information about domain name registration records. Any use of this data for any other purpose
is expressly forbidden without the prior written permission of this registrar. By submitting
an inquiry, you agree to these terms and limitations of warranty. In particular, you agree not
to use this data to allow, enable, or otherwise support the dissemination or collection of this
data, in part or in its entirety, for any purpose, such as transmission by e-mail, telephone,
postal mail, facsimile or other means of mass unsolicited, commercial advertising or solicitations
of any kind, including spam. You further agree not to use this data to enable high volume, automated
or robotic electronic processes designed to collect or compile this data for any purpose, including
mining this data for your own personal or commercial purposes. Failure to comply with these terms
may result in termination of access to the Whois database. These terms may be subject to modification
at any time without notice.

**NOTICE** This WHOIS server is being retired. Please use our RDAP service instead.
```

1.2 WhatWeb — web technology fingerprinting

WhatWeb sends web requests and compares responses with technology signatures. Results are indicators, not proof of exact versions or vulnerabilities.

```
whatweb https://example.com
```

Record the URL, scan time, HTTP status, web server, CMS/framework, JavaScript libraries, detected versions and confidence. Avoid aggressive plugins or high-aggression modes unless explicitly approved.

WhatWeb output / screenshot

[Insert evidence / attach supporting file here]

_____
_____

1.3 Nslookup — resolve domain to IP address

```
nslookup example.com
nslookup -type=A example.com
nslookup -type=AAAA example.com
```

The A record returns IPv4 addresses; AAAA returns IPv6 addresses. A CDN, load balancer or DNS rotation may return several addresses and the result can vary by resolver and time.

DNS resolution results

[Insert evidence / attach supporting file here]
_____nslookup networkwalks.com
Server: 192.168.142.2
Address: 192.168.142.2#53

Non-authoritative answer:
Name: networkwalks.com
Address: 192.232.216.135_____
_____

1.4 cURL — inspect HTTP response headers

Use uppercase -I to request response headers only. The lowercase option -l is not the correct option for this task.

```
curl -I https://example.com
curl -sS -D - -o NUL https://example.com
```

Record the status line and relevant headers such as Strict-Transport-Security, Content-Security-Policy, X-Content-Type-Options, Referrer-Policy, Set-Cookie attributes, Cache-Control, Server and Location. Header presence alone does not prove a configuration is secure.

1.5 WAFW00F — WAF detection

```
wafw00f https://example.com
```

WAFW00F identifies signatures associated with common WAF products. A positive result may identify a vendor; a negative result does not prove that no WAF exists. CDN behavior, custom rules and network conditions can affect detection.

WAFW00F output / screenshot

1.6 DNSRecon — DNS record enumeration

```
dnsrecon -d example.com -t std
```

The standard enumeration checks common DNS record types and related information. Record A, AAAA, NS, MX, SOA, TXT and discovered subdomain information where returned. Do not attempt zone transfers unless the domain owner has explicitly authorized that test.

```
dnsrecon -d example.com -t axfr   [ONLY with explicit written authorization]
```

1.7 Consolidated reconnaissance findings

Finding ID	Observation / evidence	Risk / impact	Recommendation / owner
REC-01	Whois	High	[immediate / owner]
REC-02	WhatWeb	Middium	In time / owner
REC-03	Nslookup	High	Immediate/ owner

SECTION 2 — Google Hacking Database (GHDB) Evidence Register

This section is an evidence register and attachment area for a separate Word/PDF document listing relevant GHDB references, approved search patterns, affected in-scope assets and remediation status. GHDB is a catalogue of search operators and exposure patterns; it is not a permission to access indexed systems.

2.1 Safe and authorized review procedure

- Confirm the exact domain(s) and written authorization before running any domain-restricted search.
- Use the GHDB entry as a reference for the exposure pattern; limit searches to assets owned by the organization.
- Prefer metadata-only validation. Do not download, open or distribute sensitive files, credentials, backups or personal records.
- For camera-related results, record only the public URL, hostname, timestamp and exposure indicator. Do not open, watch, capture or share a live feed unless specifically authorized as part of a controlled test.
- Report the finding to the asset owner, preserve minimal evidence securely, and request removal from public access and search indexes where appropriate.

2.2 Example domain-scoped search patterns

Purpose	Illustrative query pattern	Handling guidance
Locate indexed PDF documents	site:yourdomain.example filetype:pdf	Review titles/snippets and confirm ownership; do not retrieve sensitive content.
Locate indexed office documents	site:yourdomain.example (filetype:doc OR filetype:docx OR filetype:xls OR filetype:xlsx)	Record only documents that the organization has approved for review.
Identify directory-listing exposure	site:yourdomain.example intitle:"index of"	Notify the owner; do not browse or download directory contents.
Camera exposure indicator	Use the GHDB entry as a reference and restrict any validation to an approved camera test asset.	Do not provide or access public webcam feed links in this report; record exposure metadata only.

2.3 GHDB reference and findings register

No.	GHDB entry / reference URL	In-scope asset	Exposure category	Status / remediation
1	[https://www.google.com/search?q=inurl:webcam%20site:skylinewebcams.com%20inurl:roma]	[Hostname]	WEB CAM	[Open]
2	[http://www.insecam.org/en/view/466158/]	[Hostname]	WEBCAM	[Open]
3	[http://www.insecam.org/en/view/759172/]	[Hostname]	WEBCAM	[open]

ATTACH SUPPORTING WORD OR PDF DOCUMENT

Include GHDB entry titles/URLs, domain-scoped search patterns, dates, affected owned assets, redacted evidence and remediation notes.

[Insert evidence / attach supporting file here]

accessible from Internet. List them in below table along with their relevant dork that you have used.

2.4 Remediation guidance

- Remove public access to sensitive files and disable unnecessary directory indexing.
- Move administrative interfaces and internal resources behind authentication and network access controls.
- Remove exposed camera interfaces from public networks; require strong unique credentials, current firmware and secure remote access.
- Request search-engine cache/index removal after the underlying exposure has been corrected.
- Re-test only after the owner confirms the remediation window.

SECTION 3 — Network Scanning and Discovery Using Zenmap

Purpose: identify responding hosts on a LAN subnet approved for assessment, record host IP addresses and MAC addresses where available, and preserve a network topology artifact.

3.1 Download and install Zenmap on Windows

- Open the official Nmap download page: https://nmap.org/download.html.
- Download the current Windows self-installer (nmap-<version>-setup.exe) from nmap.org only.
- Run the installer with appropriate administrator approval. Keep the Zenmap and Npcap components selected when offered; Npcap supports packet capture and local-network discovery features.
- Complete installation, then launch Zenmap from the Start menu. Confirm that the installed version is current and that Nmap is available.
- Use the official Windows installation guide if installation or Npcap permissions fail: https://nmap.org/book/inst-windows.html.

The official Windows installer includes the option to install Zenmap and Npcap. Availability and packaging may change between releases; verify the current installer details on the official Nmap site.

3.2 Find the Windows PC's local IP address and LAN subnet

```
ipconfig
```

In the active Wi-Fi or Ethernet adapter, record IPv4 Address, Subnet Mask and Default Gateway. Do not use a disconnected adapter, VPN interface or virtual adapter unless it is within the approved scope.

Field	Example only	Your verified value
IPv4 address	192.168.1.25	[192.168.142.132]
Subnet mask	255.255.255.0	[255.255.255.0]
Default gateway	192.168.1.1	[192.168.142.2]
Calculated subnet / CIDR	192.168.1.0/24	[192.168.142.2/24]

For example, 192.168.148.132 with mask 255.255.255.0 commonly corresponds to 192.168.142.2/24. Calculate the actual network address from the observed IP and subnet mask; do not assume every LAN is /24.

ipconfig screenshot / subnet calculation evidence

[Insert evidence / attach supporting file here]

```
Connection-specific DNS Suffix  . : localdomain
  Link-local IPv6 Address . . . . . : fe80::590d:3fdf:b589:9da8%14
  IPv4 Address. . . . . . . . . . . : 192.168.142.132
  Subnet Mask . . . . . . . . . . . : 255.255.255.0
  Default Gateway . . . . . . . . . : 192.168.142.2_
```

3.3 Configure a host-discovery scan in Zenmap

- Open Zenmap. In the Target field, enter only the approved subnet in CIDR notation (for example, 192.168.142.2/24).
- Choose the Ping scan profile (host discovery, no port scan), or use the command shown below.
- Confirm the target range with the network owner before starting. Do not scan neighboring networks, public IP ranges or guest networks outside the written scope.

- Click Scan and wait for completion. Review the Nmap Output and Hosts/Services tabs.

```
nmap -sn 192.168.1.0/24
```

The -sn option performs host discovery without a port scan. On a local Ethernet segment, Nmap may use ARP discovery and show MAC addresses for responding devices. MAC addresses may be unavailable for routed hosts, devices that do not respond, or scans without required privileges.

3.4 Determine how many hosts are live

After the scan completes, use the Zenmap host list and Nmap summary to count hosts reported as up. Exclude the scanner itself only if the report's counting convention explicitly requires it; state the convention used.

Metric	Verified result
Subnet scanned	[e.g., 192.168.142.2/24]
Scan date/time and timezone	[13:54 11/Nov/2026]
Total hosts reported up	[1]
Scanner IP	[192.168.142.132]
Scan profile / command	[Ping scan / nmap -sn ...]

3.5 Record live hosts, IP addresses and MAC addresses

Host no.	Hostname / device label	IP address	MAC address	Vendor (if shown)	Notes / owner
1	[ADMIN]	[192.168.142.132]	[fe80::590d:3fdf:b589:9da8%14]	[VMWARE]	[Owner]
2					
3					
4					
5					

MAC addresses are layer-2 identifiers and are normally visible only on the same local network segment. Routers do not forward a remote device's MAC address. A blank MAC field is not necessarily a scan failure.

Zenmap Nmap Output / live-host list screenshot

_Starting Nmap 7.993 (https://nmap.org) at 2026-11-12 03:03 -0800
Nmap scan report for 192.168.142.132
Host is up.
Nmap done: 1 IP address (1 host up) scanned in 0.96 seconds_____
_____

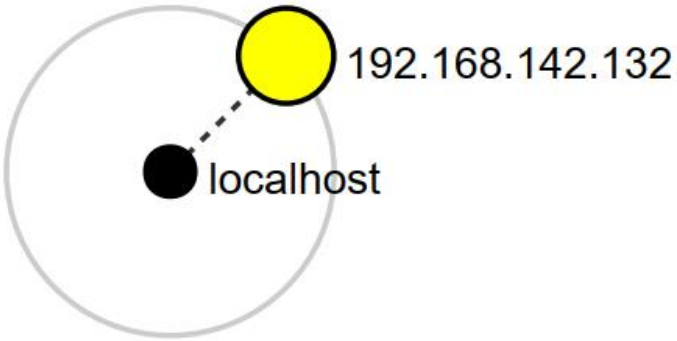

3.6 Display and save the topology as a PDF

- After the scan, open the Topology tab in Zenmap and review the discovered host layout. The topology visualization is based on the scan data and may be limited for a simple host-discovery scan.
- Save the scan results from Zenmap (for example, use Scan > Save Scan, or the equivalent save option in your installed version) in a native Nmap format such as XML so the result can be reopened.
- To create a PDF of the topology, capture/export the visible Topology view as an image using the available application/OS screenshot or export function, insert it into a document, and use Print > Microsoft Print to PDF. The exact menu label can vary by Zenmap release.

- Save the PDF to the Windows Desktop with a clear name, for example NETWORKWALKS_LAN_Topology_2026-11-12.pdf.
- Also retain the original Nmap XML output and a copy of the host inventory. The PDF is a presentation artifact; XML is the better machine-readable record.

Insert exported topology image / PDF reference

Risk rating guide

Rating	Meaning	Typical response
Critical	Confirmed severe exposure with immediate compromise potential.	Escalate immediately; contain and remediate.
High	Material exposure or weakness with significant business impact.	Prioritized remediation and owner assignment.
Medium	Meaningful weakness with constrained exploitability or impact.	Schedule remediation and verify.
Low	Limited impact or hardening opportunity.	Track as routine improvement.
Informational	Observation with no confirmed security impact.	Document for asset/context awareness.

Conclusion and next steps

Complete all result fields using observed evidence, validate findings with asset owners, and distinguish confirmed exposure from tool-generated indicators. Prioritize removal of unintended public access, correction of DNS/web security configuration, and inventory reconciliation for unknown LAN devices. Re-test after remediation and retain the scan date, scope, tool versions, commands, original outputs and approval reference.
